SUMMARY

Entry-level AI/ML Developer with a BBA in Computer Application and hands-on experience with Machine Learning, Generative AI, LLMs, RAG, and NLP. Strong interest in built production-oriented systems using AI/ML technologies. Seeking an entry-level AI/ML Developer opportunity to contribute to real-world projects.

SKILLS

Machine Learning | Deep Learning | Generative AI | Agentic AI | LLM | NLP | RAG | Python | SQL | Pandas | NumPy | Scikit-learn | FAISS | TensorFlow | MongoDB | MySQL | Streamlit

PROJECTS

AI-Powered Banking Support & Fraud Intelligence System 🔗

- Developed an **NLP-based** banking support system using **200 customer tickets** across Fraud, KYC, Loan
- Built separate **intent and sentiment models** to classify queries by topic such as Fraud/KYC/Loan and customer state such as Urgent/Confused
- Built a **RAG pipeline using FAISS** to retrieve relevant information from 4 banking policy document and generate context aware responses with an **LLM**
- Analyzed **2000 banking transaction** using amount, location, velocity and anomaly features to **classify risk levels and trigger actions** such as card blocking, escalation and document requests

Agentic AI Data Migration System 🔗

- Built an **LLM-driven agent** for **natural-language MongoDB** querying using schema/context retrieval, automated query generation and validation, and user-friendly responses
- Developed a **MongoDB to MySQL pipeline** that inferred relational schemas, transformed semi-structured documents and automated data migration
- Integrated **OpenAI API, PyMongo, SQLAlchemy and Streamlit** into an end-to-end **AI-powered database automation system**

Rapido Intelligent Mobility Insights 🔗

- **Analyzed 100K+ ride-booking records** across customer, driver, vehicle, location, traffic, weather, and time-based features to identify cancellation, fare and operational risk patterns
- **Developed four ML models** for ride outcome, fare prediction, customer cancellation risk, and driver delay, using **feature engineering** and model evaluation techniques
- Built an interactive **Streamlit dashboard with Plotly** to visualize cancellation patterns, demand trends, fare behaviour, and driver allocation signals

PROFESSIONAL EXPERIENCE

Trainee Developer, *The Kiran Academy* 🔗

06/2025 – 10/2025 | Pune, Maharashtra

- Built a full-stack E-commerce web application using the **MERN stack**

EDUCATION

Bachelor of Business Administration in Computer Application

2022 – 2025

Ashoka Center For Business And Computer Studies

CERTIFICATES

Intel & IITM Pravartak Certified Artificial Intelligence And Machine Learning Program 🔗

2025 – 2026

GUVI
